Appendix A Additional Parameter Results

Each comparison varies one HASAN training factor. Inference batch size remains fixed at 32. Accuracy is from the final checkpoint.

A1 Effect of Batch Size

Settings: 16, 32, 64, 128, 256. Accuracy in the same order: 96.857%, 97.110%, 97.356%, 96.865%, 97.609%. Inference time: 0.1210, 0.1192, 0.1312, 0.1213, 0.1193 ms per image. Bold chart labels identify the reference setting.

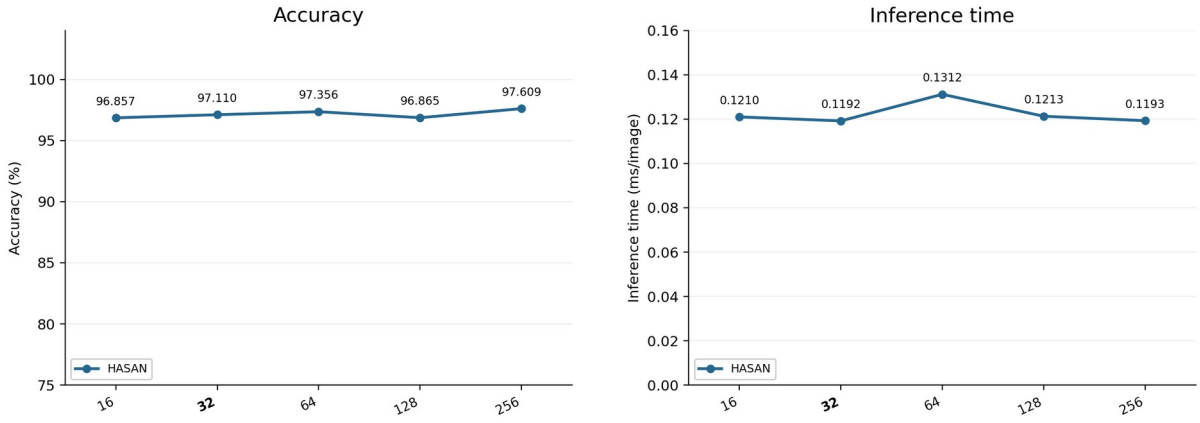

Figure A1. Batch size comparison on accuracy and inference time.

A2 Effect of Optimizer

Settings: Adam, AdamW, SGD. Accuracy in the same order: 97.110%, 97.664%, 96.603%. Inference time: 0.1195, 0.1252, 0.1195 ms per image. Bold chart labels identify the reference setting.
